

Socomec obtains MASE certification

Benfeld, 7 January 2019

Socomec has obtained MASE certification (Manuel d'Amélioration Sécurité Santé Environnement des Entreprises*) for its customer service call-outs. The Group is thus committed to constantly improving its Health, Safety, and Environment (HSE) performance.

Managing safety

The Socomec Group's Centre of Expertise has recently obtained MASE certification (Manuel d'Amélioration Sécurité Santé Environnement des Entreprises*) covering all its service call-outs for customers based in France. MASE certification is aimed at reducing risks and dangerous situations at work, whatever the company's business activity.

The certification is a support tool for the permanent and continuous improvement of the company's performance in the fields of health, safety and environment (HSE). It reflects the Group's drive for continuous improvement of the safety management system: management commitment, staff qualification, work organisation and controls.

At the request of customers

By improving the company's Health, Safety and Environment performance, MASE certification ensures sustainable working conditions for employees: in particular, it reduces the number of workplace accidents at customer sites. Some of these customers, especially those in the chemicals and petrochemicals sectors, have encouraged the Socomec Group to embark on this new certification process. According to Luc Moulin, Sales Director for Critical Power Systems France, *"this certification proves once again our commitment to controlling health and safety risks by implementing various processes that benefit both our employees and our customers."*
